Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering)

Li Wang, Huan Tang

Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) Li Wang, Huan Tang

This SpringerBrief focuses on crucial issues for device-to-device (D2D) communications within the rapidly expanding 4G LTE toward 5G system. Several critical technical challenges in D2D communications are discussed, and D2D standardization activities in 3GPP are provided. Topics range from proximity discovery and mode selection, to resource management. The authors investigate proximity detection solutions for enabling direct user equipment communication by listening to uplink transmission. The problem of mixed mode selection is demonstrated to meet multiple quality of service (QoS) requirements in D2D enabled cellular networks. Finally, the brief explores the problem of designing interference-constrained resource allocation to pair cellular user resources with potential D2D links in cellular D2D underlay, with the goal of improving spectrum efficiency.

Device-to-Device Communications in Cellular Networks targets researchers and professionals working in wireless communications and networks. Advanced-level students in electrical engineering and computer science studying wireless communications and networks can also use this material as a study guide.

From reader reviews:

Joshua Johnson:

This Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) book is absolutely not ordinary book, you have after that it the world is in your hands. The benefit you have by reading this book is information inside this e-book incredible fresh, you will get information which is getting deeper anyone read a lot of information you will get. This kind of Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) without we understand teach the one who examining it become critical in considering and analyzing. Don't always be worry Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) can bring any time you are and not make your bag space or bookshelves' become full because you can have it with your lovely laptop even cellphone. This Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) having great arrangement in word along with layout, so you will not sense uninterested in reading.

Martin Thomas:

The e-book with title Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) has lot of information that you can study it. You can get a lot of advantage after read this book. This kind of book exist new know-how the information that exist in this e-book represented the condition of the world at this point. That is important to yo7u to know how the improvement of the world. This particular book will bring you throughout new era of the glowbal growth. You can read the e-book in your smart phone, so you can read that anywhere you want.

Gayle Anderson:

Many people spending their period by playing outside with friends, fun activity having family or just watching TV the whole day. You can have new activity to spend your whole day by looking at a book. Ugh, do you think reading a book can definitely hard because you have to bring the book everywhere? It all right you can have the e-book, delivering everywhere you want in your Mobile phone. Like Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) which is having the e-book version. So , why not try out this book? Let's see.

Virgie Haynes:

Is it a person who having spare time in that case spend it whole day simply by watching television programs or just resting on the bed? Do you need something totally new? This Device-to-Device Communications in Cellular Networks (SpringerBriefs in Electrical and Computer Engineering) can be the reply, oh how comes? It's a book you know. You are therefore out of date, spending your time by reading in this brand new era is common not a geek activity. So what these books have than the others?
