ISO TC 146/SC 6

ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling ISO TC 146/SC 6

This part of ISO 16017 gives general guidance for the sampling and analysis of volatile organic compounds (VOCs) in air. It is applicable to ambient, indoor and workplace atmospheres and the assessment of emissions from materials in small- or full-scale test chambers. This part of ISO 16017 is appropriate for a wide range of VOCs, including hydrocarbons, halogenated hydrocarbons, esters, glycol ethers, ketones and alcohols. A number of sorbents¹⁾ are recommended for the sampling of these VOCs, each sorbent having a different range of applicability. Very polar compounds will generally require derivatization, very low boiling compounds will only be partially retained by the sorbents, depending on ambient temperature, and can only be estimated qualitatively. Semi-volatile compounds will be fully retained by the sorbents, but may only be partially recovered. Compounds for which this part of ISO 16017 has been tested are given in tables. This part of ISO 16017 may be applicable to compounds not listed, but in these cases it is advisable to use a back-up tube containing the same or a stronger sorbent. This part of ISO 16017 is applicable to the measurement of airborne vapours of VOCs in a concentration range of approximately 0,5 µg/ m³ to 100 mg/m³ individual compound. The upper limit of the useful range is set by the sorptive capacity of the sorbent used and by the linear dynamic range of the gas chromatograph column and detector or by the sample-splitting capability of the analytical instrumentation used. The sorptive capacity is measured as a breakthrough volume of air, which determines the maximum air volume that shall not be exceeded when sampling. The lower limit of the useful range depends on the noise level of the detector and on blank levels of analyte and/or interfering artefacts on the sorbent tubes. Artefacts are typically sub-nanogram for well-conditioned Tenax GR and carbonaceous sorbents such as Carbopack/Carbotrap type materials, carbonized molecular sieves and molecular sieves such as Sphero carb, or pure charcoal; at low nanogram levels for Tenax TA and at 5 ng to 50 ng levels for other porous polymers such as Chromosorbs and Porapak. Sensitivity is typically limited to 0,5 µg/m³ for 10-litre air samples with this latter group of sorbents because of their inherent high background. The procedure specified in this part of ISO 16017 is applicable to low flowrate personal sampling pumps and gives a time-weighted average result. It is not applicable to the measurement of instantaneous or short-term fluctuations in concentration.¹⁾ The sorbents listed in annex C and elsewhere in this International Standard are those known to perform as specified under this part of ISO 16017. Each sorbent or product that is identified by a trademarked name is unique and has a sole manufacturer; however, they are widely available from many different suppliers. This information is given for the convenience of users of this part of ISO 16017 and does not constitute an endorsement by ISO of the product named. Equivalent products may be used if they can be shown to lead to the same results.

From reader reviews:

Manuel Coury:

Here thing why this specific ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling are different and trustworthy to be yours. First of all examining a book is good nevertheless it depends in the content of the usb ports which is the content is as delicious as food or not. ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling giving you information deeper including different ways, you can find any publication out there but there is no publication that similar with ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling. It gives you thrill studying journey, its open up your personal eyes about the thing this happened in the world which is probably can be happened around you. It is possible to bring everywhere like in park your car, café, or even in your approach home by train. In case you are having difficulties in bringing the imprinted book maybe the form of ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling in e-book can be your substitute.

Andrew Martin:

The book untitled ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling contain a lot of information on the item. The writer explains your girlfriend idea with easy approach. The language is very simple to implement all the people, so do not necessarily worry, you can easy to read the idea. The book was authored by famous author. The author brings you in the new age of literary works. It is possible to read this book because you can read on your smart phone, or program, so you can read the book inside anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site and also order it. Have a nice go through.

Michael Davis:

In this period of time globalization it is important to someone to find information. The information will make professionals understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, newspaper, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The actual book that recommended for you is ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling this guide consist a lot of the information from the condition of this world now. That book was represented how can the world has grown up. The words styles that writer value to explain it is easy to understand. The writer made some analysis when he makes this book. Here is why this book ideal all of you.

Fred Musso:

A number of people said that they feel bored stiff when they reading a reserve. They are directly felt this when they get a half areas of the book. You can choose often the book ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling to make your personal reading is interesting. Your current skill of reading expertise is developing when you like reading. Try to choose very simple book to make you enjoy you just read it and mingle the idea about book and reading especially. It is to be 1st opinion for you to like to start a book and read it. Beside that the e-book ISO 16017-1:2000, Indoor, ambient and workplace air -- Sampling and analysis of volatile organic compounds by sorbent tube/thermal desorption/capillary gas chromatography -- Part 1: Pumped sampling can to be your new friend when you're sense alone and confuse in what must you're doing of these time.
