Concurrent and Real-Time Programming in Ada Alan Burns, Andy Wellings

Ada is the only ISO-standard, object-oriented, concurrent, real-time programming language. It is intended for use in large, long-lived applications where reliability and efficiency are essential, particularly real-time and embedded systems. In this book, Alan Burns and Andy Wellings give a thorough, self-contained account of how the Ada tasking model can be used to construct a wide range of concurrent and real-time systems. This is the only book that focuses on an in-depth discussion of the Ada tasking model. Following on from the authors' earlier title *Concurrency in Ada*, this book brings the discussion up to date to include the new Ada 2005 language and the recent advances in real-time programming techniques. It will be of value to software professionals and advanced students of programming alike: indeed every Ada programmer will find it essential reading and a primary reference work that will sit alongside the language reference manual.

From reader reviews:

Ella Jacobs:

Information is provisions for anyone to get better life, information today can get by anyone in everywhere. The information can be a expertise or any news even restricted. What people must be consider whenever those information which is from the former life are challenging to be find than now is taking seriously which one is appropriate to believe or which one the particular resource are convinced. If you have the unstable resource then you buy it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Concurrent and Real-Time Programming in Ada as your daily resource information.

Bettina Cutler:

As we know that book is very important thing to add our information for everything. By a reserve we can know everything we want. A book is a range of written, printed, illustrated or even blank sheet. Every year seemed to be exactly added. This publication Concurrent and Real-Time Programming in Ada was filled in relation to science. Spend your time to add your knowledge about your technology competence. Some people has various feel when they reading a new book. If you know how big benefit from a book, you can sense enjoy to read a guide. In the modern era like currently, many ways to get book that you just wanted.

Richard Cassidy:

As a college student exactly feel bored to be able to reading. If their teacher expected them to go to the library or make summary for some e-book, they are complained. Just minor students that has reading's heart and soul or real their passion. They just do what the instructor want, like asked to the library. They go to there but nothing reading significantly. Any students feel that reading through is not important, boring in addition to can't see colorful photos on there. Yeah, it is for being complicated. Book is very important in your case. As we know that on this period, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Concurrent and Real-Time Programming in Ada can make you really feel more interested to read.

Justin Mireles:

What is your hobby? Have you heard that question when you got learners? We believe that that question was given by teacher with their students. Many kinds of hobby, Everyone has different hobby. And you know that little person like reading or as studying become their hobby. You must know that reading is very important and book as to be the factor. Book is important thing to increase you knowledge, except your current teacher or lecturer. You see good news or update concerning something by book. Amount types of books that can you choose to adopt be your object. One of them are these claims Concurrent and Real-Time Programming in Ada.
